

List Of Implemented EIP

No	Doc #	Reg #	Name	Dept.	Problem Description	Proposed Solution
1	1637	16.08.2023	Muhamad Makmur	OPS	Salak Tinggi Station. 1. drop off area is crowded during peak hour. 2. taxi or grab driver park their car at drop off area	My suggestion is to remove the OKU symbol and make all parking spaces in front station with the word "DROP OFF ONLY". Change the position/location of the towing signboard to a place that is easy to see. - will reduce crowded during peak hour. - can reduce taxi or grab drivers park their vehicles at drop off area - able to educate passenger/ driver for smooth traffic
2	1638	16.08.2023	Muhamad Makmur	OPS	Salak Tinggi Station less pleasant smell from the big garbage can (refuse area)	currently big garbage can at TNB station (parking A beside motorcycle parking) suggest to move to the side multistory car park building near juwara store. -easy for juwara cleaner to clean the garbage can if smelly/dirty -easy access for juwara garbage collector to pickup garbage.
3	1639	16.08.2023	MOHD NAZIM BIN ZAKARIA	PNE	Many of the SIG PIDS pixels are experiencing fading issues. I have confirmed that the problem lies with the transparent plastic.	I would like to propose a suggestion to save time and costs. By internally replacing the faded plastic film, we can solve the pixel shading problem. We have tested the suitable polarizer film type and found that the 135-degree polarizer film is compatible with our pixels. IF MONETARY VALUE, SHOW SAVINGS: By doing internal pixel repair of course it will save a lot of money. Roughly estimated cost of materials to repair each pixel is only around Rm30 compared to outside repairing which costs hundreds of ringgit each. Roughly internal repair cost per PIDS RM30 X 6 pixels X 2 sides = RM360 External repair cost per PIDS RM280 X 6 pixels X 2 sides= RM3,360
4	1645	17.10.2023	Azriatushaida Ahmad	FAD	Calls could not be answered in time if ADM staff is doing work in ADM store. Currently we practice forwarding the calls to our personal handphone. Many times the forwarded call to our own handphone got cancelled due to telecommunication issues and this has disrupted the smooth flow of answering calls for the company. Furthermore, no call can be forwarded to the attended recipient if we are using our personal handphone.	Since the deck phone for company usage is not applicable company-wide, suggest putting one normal phone in the ADM store for the purpose of mirroring the calls from the main line. This is to ensure ADM staff can attend to incoming calls from outside even if we are doing work in our store area without having to forward the incoming call to our personal handphone.
5	1650	06.12.2023	Md Fairuz bin Sandi	SYS	OCL service vehicle is experiencing a sludge problem in the fuel system. 1. Refer to the fuel system schematic, the fuel filter is on no. 2 & 4. 2. Sludge from the diesel tank will be in the hose starting from the diesel tank to the engine. 3. Sludge will only be filtered on the filter number 2 and 4 only.	By installing a strainer on the fuel intake in the diesel tank, it can prevent sludge from being in the hose and also the piping system in the engine. SAVINGS: 1. Reduce the time to check failures. 2. Reduce the impact on other parts of the fuel system 3. Reduce the frequency of changing filters
